## GROZ-BECKERT WITH SIX PRODUCT SECTORS SUPPORTED BY AUGMENTED REALITY

Groz-Beckert will be represented at ITMA with its six product sectors and will have various innovations in its luggage. The presentations at the booth will be supported by augmented reality applications. This allows visitors to discover the products both live and virtually.

The Knitting product sector will be represented at the Groz-Beckert stand with its four product groups circular knitting, flat knitting, legwear and warp knitting. In the circular knitting segment, for example, two newly developed knitting systems will be on show which have been realized in collaboration with machine manufacturers. The developments focus on energy savings, extended cleaning intervals and increased process reliability.

The flat knitting group will be presenting a newly developed high-performance needle, which is particularly suitable for the production of technical or medical textiles.

## BIANCALANI TO UNVEIL TWO NEW PRODUCTS AQUARIA AND DUETTO

Biancalani Textile Finishing Machinery (Biancalani), a global leader in textile finishing machinery, is all set to launch two new products at the forthcoming ITMA 2023 trade fair to be held in Milan. In an exclusive interaction,

the company's Director Rossano Biancalani sounded pleased with Biancalani's performance in 2022. Elaborating, he said: "It was a very good year for the final development of our new products which will be showcased during ITMA 2023 to Indian customers and those who will visit the fair." As regards the key global markets for the company, Rossano said: "India, Turkey, China and Pakistan are our most important markets but for the future we have our sights set on Africa's textile industry."

# PICANOL TO UNVEIL REVOLUTIONARY RAPIER MACHINE AT ITMA

At ITMA 2023, Picanol, the world's leading weaving machine manufacturer, will be presenting its latest high-tech weaving machines and services at Booth B201 in Hall 6. ITMA is the world's most influential textile and garment technology exhibition and it takes place from June 8 - 14, 2023, in Milan (Italy).

The eye-catcher at the Picanol booth will be the world premiere of an all-new and revolutionary rapier weaving machine, the Ultimax, that will become available in the first quarter of 2024.

In total, Picanol will have 12 machines on display at ITMA 2023. In addition to 6 rapier weaving machines, Picanol will also present 4 airjet weaving machines featuring new developments. Furthermore, a rapier machine in Jacquard execution will be on display at the Bonas booth and an airjet machine in Jacquard execution will be presented at the Stäubli booth.

"Picanol has sold more than 130,000 rapier machines worldwide since the launch of our first rapier weaving machine, and we have challenged ourselves to further improve our current and highly successful OptiMax-i Connect rapier platform. The result is the brand-new Ultimax

rapier weaving machine that focuses on three main benefits: ultimate performance and high-quality output, readiness for the sustainability requirements of tomorrow, and the greatest ease of use thanks to a maximum level of digitization.

The classic Picanol exterior design of the machine has been radically disrupted, to make it clear from the outside how revolutionary Ultimax is on the inside," - Johan Verstraete, Vice President Weaving Machines

"Creating a worthy successor to the OptiMax rapier generation, of which over 60,000 units are running worldwide, was a real challenge. But combining 85 years of experience with new ideas and technologies has resulted in the all-new and revolutionary Ultimax rapier machine. It excels in the fields of performance and quality, it is designed with sustainability as the baseline, and the high degree of digitization results in a previously unseen ease of use."

ITMA 2023 will also be the moment that Picanol launches a speed increase on its airjet platform, the OmniPlus-i Connect. This is another example of how Picanol sets the benchmark in the industry. Also on display for the very first time will be a brand-new leno system, the o-Leno, which combines smart performance, user-friendliness, and intuitive control at its best.

Johan Verstraete, Vice President Weaving Machines

P. Kasiviswanathan, Board of Director, Picanol India Pvt. Ltd.

# WEKO AND ROTASPRAY PRESENTING SUSTAINABLE TEXTILE PROCESSES

WEKO and RotaSpray, the leading manufacturers of rotor spray minimal application systems for textile dyeing, finishing, coating and moisture management will be exhibiting at ITMA in Milan, Italy, from June 8 to 14, 2023 at **Hall 14, Stand B103**.

"The worldwide textile industry is suffering from COVID-19 impact and the highly unsustainable use of water, energy and chemicals as well as an immense cost pressure," says Jayanta Sanyal – Head of Technical Sales & Processes at WEKO.

WEKO and RotaSpray have therefore analyzed today's processing in dyeing and finishing mills to find out opportunities to increase sustainability, productivity and profitability.

**Jayanta Sanyal, Head of Technical Sales & Processes, WEKO**

Today one of the main dyeing process is discontinuous and consuming high amount of water, production time and drainage.

The existing solutions for continuous dyeing ranges are consuming high energy, chemicals and generating a high load.

Jörg Neyer, Head of Neuenhauser Transport Automation

## NEUENHAUSER GROUP TO DISPLAY SERIES OF TECHNOLOGY-INTENSIVE PRODUCTS AT ITMA

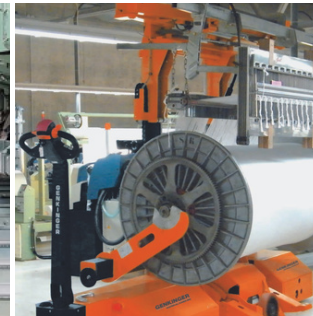

The Neuenhauser Group has always attached great importance to continuous product and process innovations. The group companies are ready to make a splash with a line-up of a series of products featuring state-of-the-art technologies at ITMA 2023. In an exclusive chat, Jörg Neyer, Head of Neuenhauser Transport Automation, gave detailed insights into the company's product range, technology innovations and participation in ITMA and future plans: "Due to the weakening sales markets worldwide in the textile industry, we started the year 2023 with caution and are now pleased about the good order intake so that it will be a good year 2023 for the Neuenhauser Group."

"Winding technology from Neuenhauser, travelling cleaner form Sohler-Neuenhauser, warp beams and warper beams from Scholze Germany and handlings equipment from Genkinger – we manufacture for the weaving sector."

In the spinning sector we produce transport automation from Neuenhauser, travelling cleaner form Sohler-Neuenhauser and service machines from Neuenhauser Rosink," Neyer said before adding, "As well in coating and laminating sector we produce customer-made solutions at Neuenhauser Ontec."

Giving details about the key global markets for the group, he remarked: "The Neuenhauser Group's Textile Division has been the market leader in the various segments for years as a producer in the textile markets. But our main market is still India, China, Pakistan, Bangladesh and the United States."
